

AAI's UTAH TECHNOLOGY CENTER

TEXTRON Systems

Providing technology upgrades, spares and depot enabling

Skilled logistics and technical services increase system availability, concurrency and useful life while reducing total cost of ownership. AAI's Utah Technology Center is a trusted partner whose experienced logisticians and technicians develop and implement comprehensive strategies for customer requirements: refurbishment, overhaul and replacement; aviation test equipment; partnering and performance based logistics (PBL) support; and relocation and installation services.

VALUE-BUILDING LOGISTICS & TECHNICAL SERVICES

AAI's Utah Technology Center offers numerous enabling competencies to support military equipment and systems.

We are conveniently located near the Ogden Air Logistics Center at Hill Air Force Base. Our engineers and technicians deliver rapid response to on-demand requests for services at customer sites or in our own modern, well equipped facility.

Featured below are highlights of our many capabilities:

Refurbishment/Overhaul/Replacement

AAI modernizes aging military systems through upgrades, modifications and technology insertion — improving performance, increasing reliability and lowering life cycle costs. Our engineers and technicians provide support services across multiple technical disciplines including electronic, electro-mechanical, hydraulic, pneumatic, electro-optic and software technologies.

AAI renovates and upgrades a variety of military test technologies.

Aviation Test Equipment

AAI's Utah Technology Center is your exclusive center for all support, upgrades and spare parts for previously delivered AAI test equipment from ACL Technologies. As an experienced systems provider, we also offer new, highly versatile test equipment for multiple applications through strategic technology partnerships.

AAI offers a range of aviation test systems, as well as support and spares.

Partnering and PBL Support

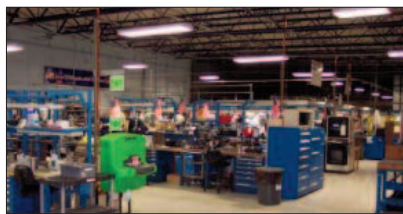

AAI is an award-winning industry leader in value-added, third party performance-based solutions that support asset availability for the warfighter. Our sustainment, supply chain and inventory management, and depot partnership services focus on identifying the customer's core requirements and managing all of the critical factors for success. These tailored solutions might include repair forecasting, upgrades and modifications, as well as working closely with the necessary supply chain partners to increase asset availability and the effectiveness of the repair process.

Relocation/Installation

AAI's experienced personnel provide trouble-free, professional relocation and installation services ranging from project management to complete, turnkey installation on projects of all sizes. We provide innovative solutions and support for worldwide relocations and deployments — everything from comprehensive planning and rigging equipment to installation of energy systems and environmental controls.

AAI provides seamless relocation services.
